BOTTOM LINE

A 5% currency move weighs 12.9x as much on the result as a 1 pp interest-rate move.

KEY POINTS

- **Aluminium is EUR 663k a year above budget at today's price.** It cost EUR 2,852 per tonne in September (+1.7% on the month, +26.0% on a year), 5.6% above the EUR 2,700 budget.
- **The rise is losing pace:** the last three months averaged −8.4% against the three before. One month does not make a trend; the next edition will show whether the fall continues.
- **Currency is the largest sensitivity, and it was steady:** EURCZK 24.37 (+0.3% on the month). Each 5% move shifts the result by CZK 45m, 25.0% of EBITDA.
- **Interest is stable:** PRIBOR 3.84%, about CZK 18.7m a year on the CZK 350m loan.
- **Customer demand is strong:** Czech car and parts output is 136.9 (2021 = 100), higher than in 98% of the last ten years' months.

What changed this month (November 2026)

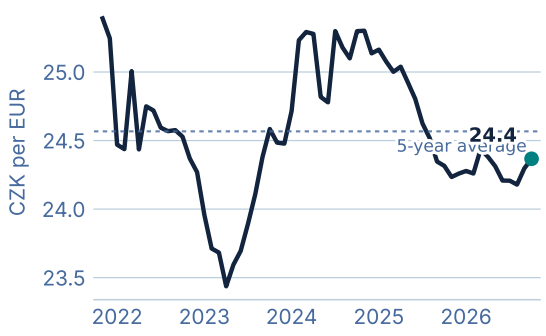

INDICATOR	UNIT	PREVIOUS	LATEST	ON THE MONTH	ON THE YEAR	EFFECT ON RESULT, A YEAR	DATA TO
EURCZK exchange rate	CZK per EUR	24.3	24.4	+0.3%	+0.2%	+2.6 CZKm	Oct 2026
3-month PRIBOR	% a year	3.83	3.84	+0.01 pp	+0.34 pp	−0.03 CZKm	Aug 2026
Czech car and parts output	index 2021 = 100	120.9	136.9	+13.2%	+9.4%	–	Sep 2026
Aluminium price in EUR	EUR per tonne	2,803	2,852	+1.7%	+26.0%	−214 EURk	Sep 2026

What it means for the company's cost

The company buys 4,200 tonnes a year at EUR 3,300 per tonne; 90% of the price follows the market price. Annual cost at today's price is EUR 13,860k, 22.4% of revenue.

Low, High and Severe are the 25th, 75th and 90th percentile of the price's 12-month changes over the last ten years; Flat keeps today's price. The largest 12-month rise in that period was +72.5%. These are past outcomes, not a forecast.

Annual cost by scenario (EUR k)

What it means for the company's result

The company has CZK 350m of floating-rate debt and net EUR revenues of 37,000k a year (CZK 901.6m at the latest rate). The figures below are the arithmetic effect of rate and exchange-rate moves on the annual result; negative means worse.

What moves the annual result: share of EBITDA

Effect on the annual result (CZK m)

MOVE	EFFECT (CZK M)	% OF EBITDA
EUR weaker by 10%	−90.2	−50.1%
EUR weaker by 5%	−45.1	−25.0%
EUR stronger by 5%	+45.1	+25.0%
EUR stronger by 10%	+90.2	+50.1%
Rate down 1.0 pp	+3.50	+1.9%
Rate up 1.0 pp	−3.50	−1.9%

Next update

- The December edition adds October prices and the latest PRIBOR, and compares the year-to-date metal cost with the budget.

HOW TO READ THIS BRIEF

Every figure is public data (numbered sources at the end, with the date downloaded), arithmetic on the company's own inputs (marked as client input), or an official projection labelled as such. Statistics use monthly averages; rates change in percentage points (pp), prices in percent. Price-risk and currency-risk management is outside the scope of this brief; discuss it with the company's bank or broker.

HOW THE MARKET PRICE REACHES THE PROFIT AND LOSS ACCOUNT

Annual cost = volume × contract price; 90% of the contract price moves with the market price, so a 10% market move changes cost by EUR 1,247k, which is 16.9% of EBITDA. The market price is quoted in US dollars and converted at the ECB rate, so a weaker euro raises the euro cost of the same dollar price. The budget assumed 2,700 per tonne; the gap to today's level is the first number on page 1.

HOW RATES AND THE EXCHANGE RATE REACH THE RESULT

Floating-rate debt reprices with the reference rate, so each 1 pp move changes annual interest by CZK 3.50m (1.9% of EBITDA). Net EUR revenue of 37,000k a year is converted at the market rate; a 5% move changes its value by CZK 45.1m, which is why the exchange rate dominates the tornado chart.
